Introduction

The Survey

The General Practice Assessment Questionnaire (GPAQ) surveys how patients perceive their doctor's practice. The survey covers aspects of quality best assessed by asking patients, and most highly valued by patients.

Survey Development

GPAQ was introduced in 2004. This version, GPAQ V3, has been revised (2011) to encompass the Directed Enhanced Service (DES) for Patient Participation which includes collecting patients' views through a local survey

This Report

For each question, a summary of how many patients responded to each answer within each question is given.

A Note about Numbers /Subtotals

Total figures include those who did not answer the question about sex or age. Therefore where subtotals are given for the split between males and females, and similarly those under and over 45, these may add up to less than figures in the total column.

Benchmarks

We now have benchmarks from 27,000 questionnaires collected for GPAQ V3, these are highlighted in yellow. For the questions identical to the national survey, practices may wish to benchmark their results against those of the national survey, for which the numbers collected are much greater.

In addition, for questions identical, or nearly identical to questions in the GPPS survey, April 2010-March 2011 GPPS national benchmarks are given - as best possible - in a column to the right of your practice results, highlighted in green.

Taking Action on Results

GPAQ has been designed for scores to be used to improve care in your practice. The questions are not vague or general. They relate to specific aspects of care where there is clearly something to be done, if the practice judges that improvement is needed. More information is given in the booklet "Improving your practice with patient surveys" which can be downloaded from the GPAQ website: www.gpaq.info
